Underwater Intervention @ Ifremer

Systems, system of systems and methods

- **Engineering for the Ifremer national mean agency**
 - ➔ Tow systems : 25 000 km profiles
 - ➔ HOV : more than 3 000 plongées in 30 Years
 - ➔ VICTOR 6000 : more than 4200 hours in 10 Years
 - ➔ IDEF^x,ASTER^x : Survey AUV on an operational learning curve, 3500km in 30months
 - ➔ Observatories engineering, design, installation and maintenance
- **Contributive, funded, RandD under contracts**
 - ➔ Underwater systems, robotics, navigation, positioning, acoustic, optic
 - ➔ Pioneer for hybrid and intervention AUVs
- ➔ **40 Engineers and technicians working with 40 operational Technicians and crews within Génavir for operational deployment and first level maintenance**
 - ➔ New systems design , design authority functions
 - ➔ Existing systems evolutions, large overhauls, cycle of life management
 - ➔ RandD on systems and subsystems
 - ➔ Procedures

Engineering and research department For Underwater systems

Département Systèmes sous-Marins
DOP/DCM/SM
30781
Directeur : V. Rigaud
Secrétaire : A. Laurantin

Projet Ingénierie Opérationnelle : JF. Drogou
Projet AUV : J. Opderbecke
Projet Module Mesures en Route
et ingénieur responsable *Victor 6000* : P. Siméoni
Ingénieur en charge du *Nautilus* : JP. Lévèque **
Responsable Qualité : L. Brisset
Assistant projet & communication : M. Bonnefoy
Correspondante Administrative : V. Asseline •

Service Positionnement,
Robotique, Acoustique,
Optique – PRAO
M. Perrier
30783

Secrétariat : V. Lemaire

A.G. Allais
P. Arzeliers
A. Bonnassié*
M.E. Bouhier
V. Brandou*
B. Duchêne
P. Duformelle
M. Drogou
T. Edmond
C. Gibaudan

Service Systèmes
Électroniques, Électriques
Embarqués – S3E
P. Léon
30784

Secrétariat : A. Merien

D. Chenot
S. Dentrecolas
B. Galizi
Y. Hillion ***
C. Marfia
H. Martinossi
F. Roland
X. Saint-Laurent
C. Pernot **

Service Ingénierie
d'Intervention et
Développements
Mécaniques – 2IDM
M. Lucioni
30782

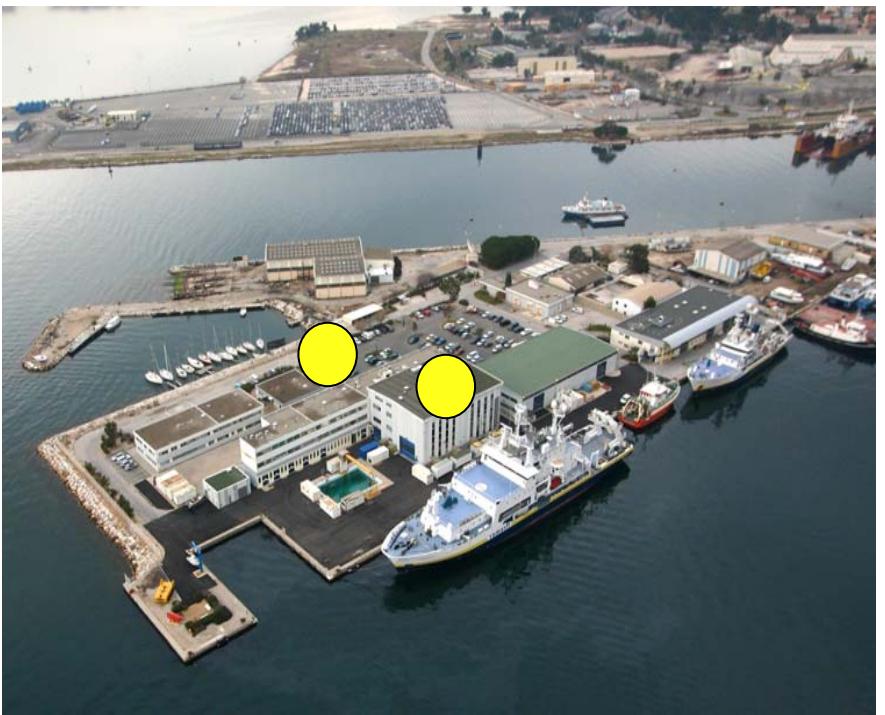

Secrétariat : M. Sciarrone
E. Boy (rempl.) ***

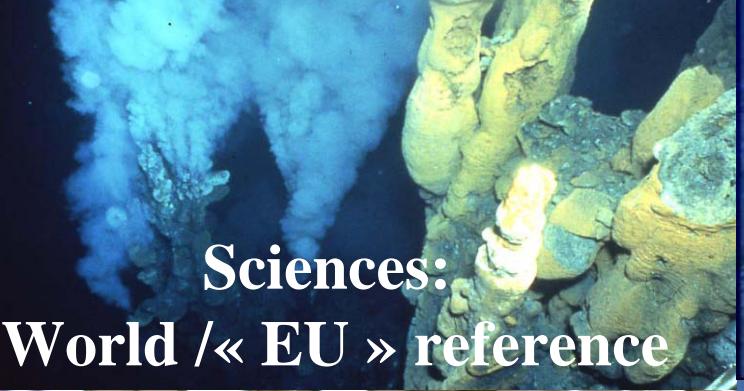

L. Artzner
V. Ciausu ***
JP. Gilliotte
C. Lévèque
C. Martin
A. Massol

+ 40 Technicians within Genavir for the Operations
And first level maintenance

European Center of Underwater Technologies La Seyne sur Mer-Toulon on the Med sea!

Sciences:
World /« EU » reference

System of systems
Maturity and competencies

Operational system

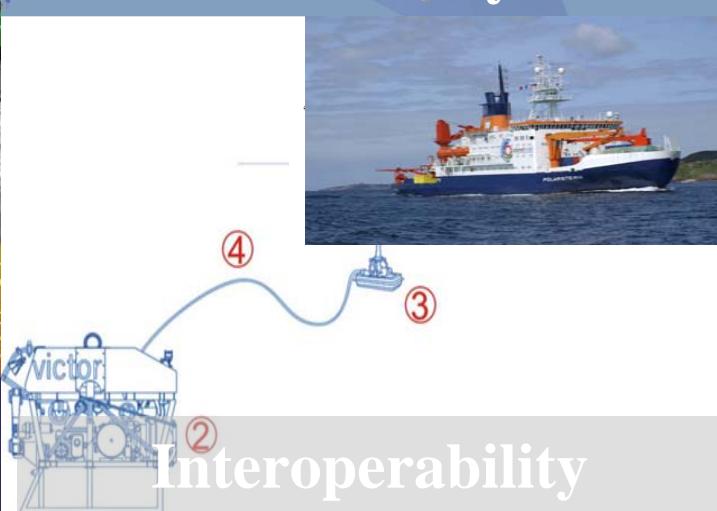

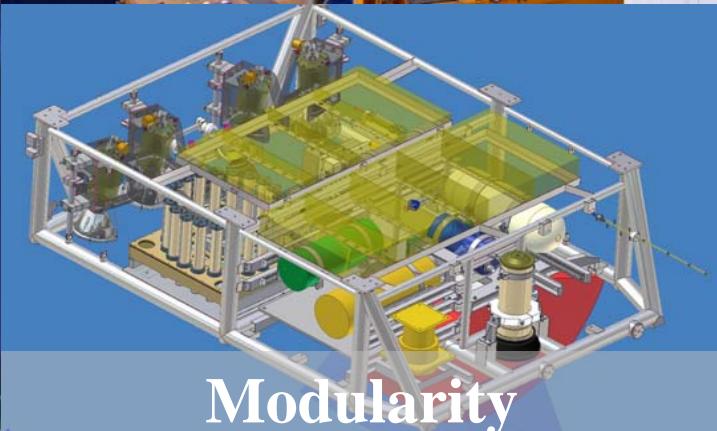

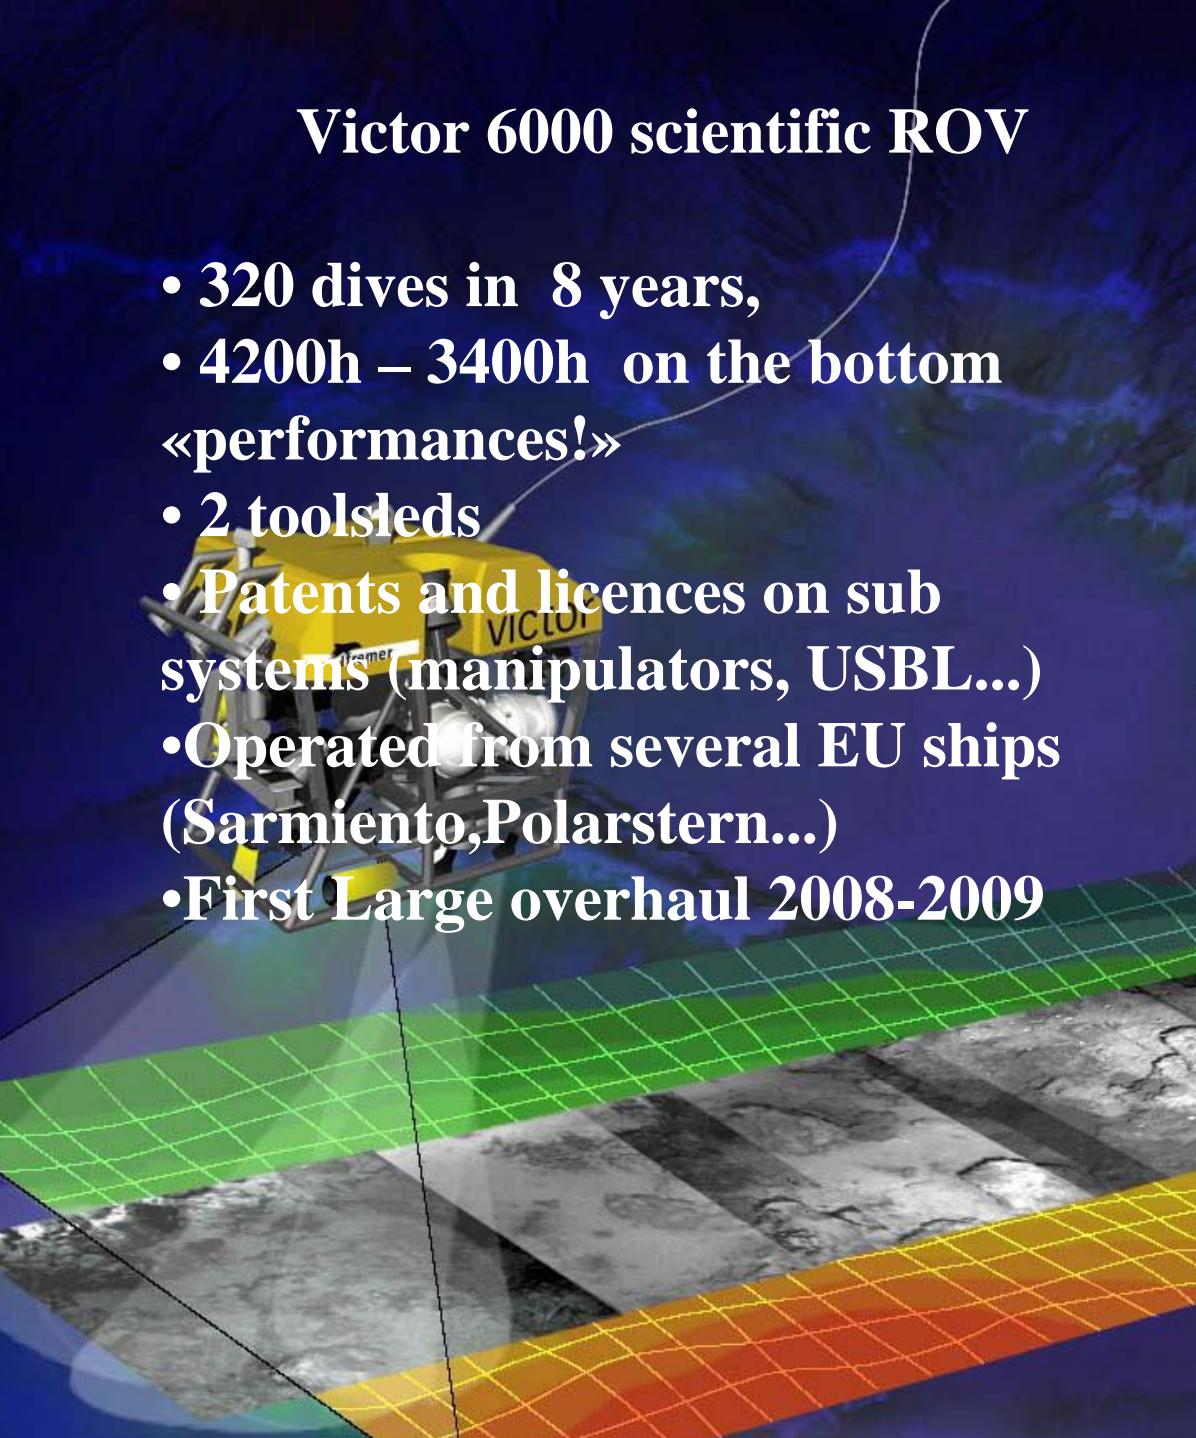

Nautile HOV

1500 dives in 20 years

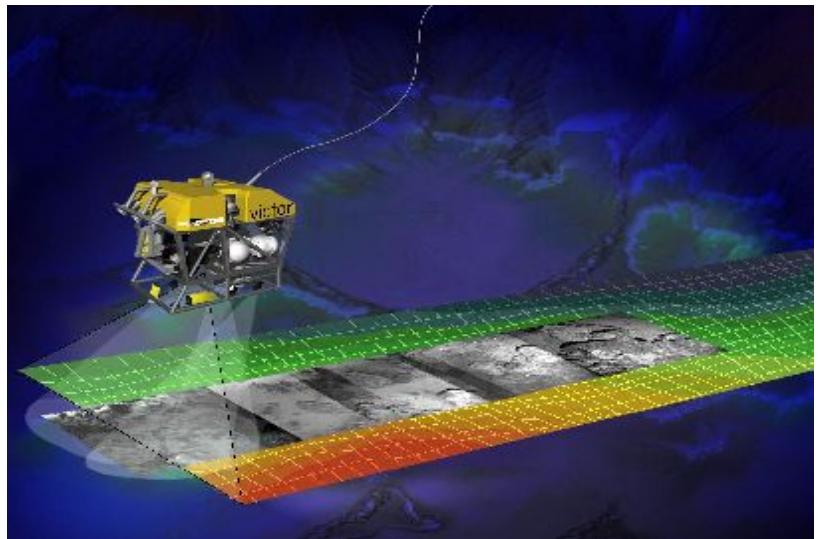

Victor 6000 scientific ROV

- 320 dives in 8 years,
- 4200h – 3400h on the bottom «performances!»
- 2 toolsleds
- Patents and licences on sub systems (manipulators, USBL...)
- Operated from several EU ships (Sarmiento, Polarstern...)
- First Large overhaul 2008-2009

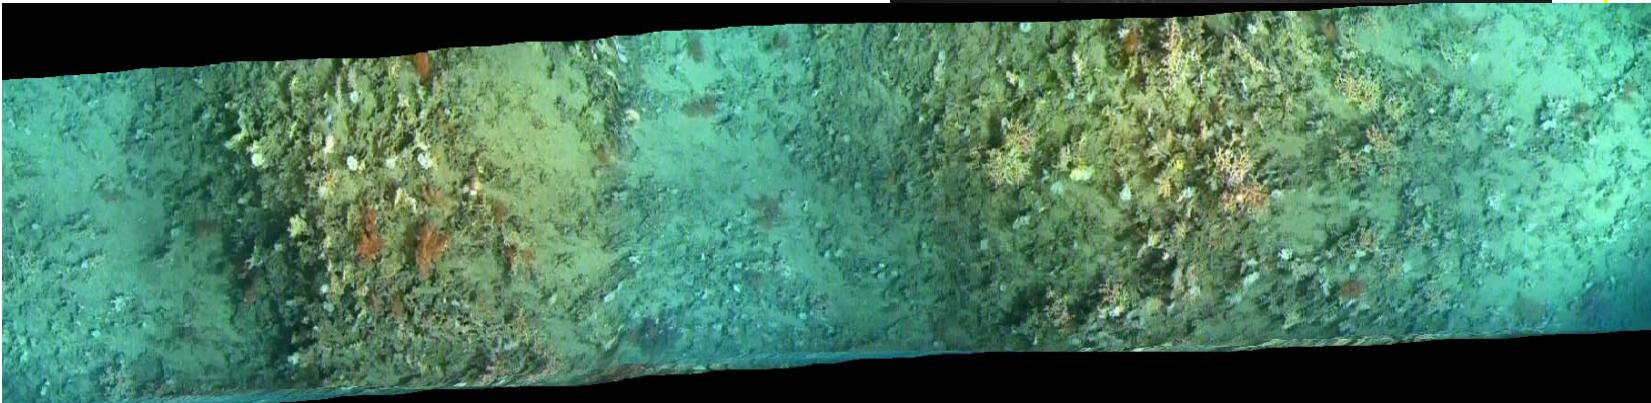

Interoperability

New “en route” Module: HR multimodal mapping with Multibeam and optic with AWI

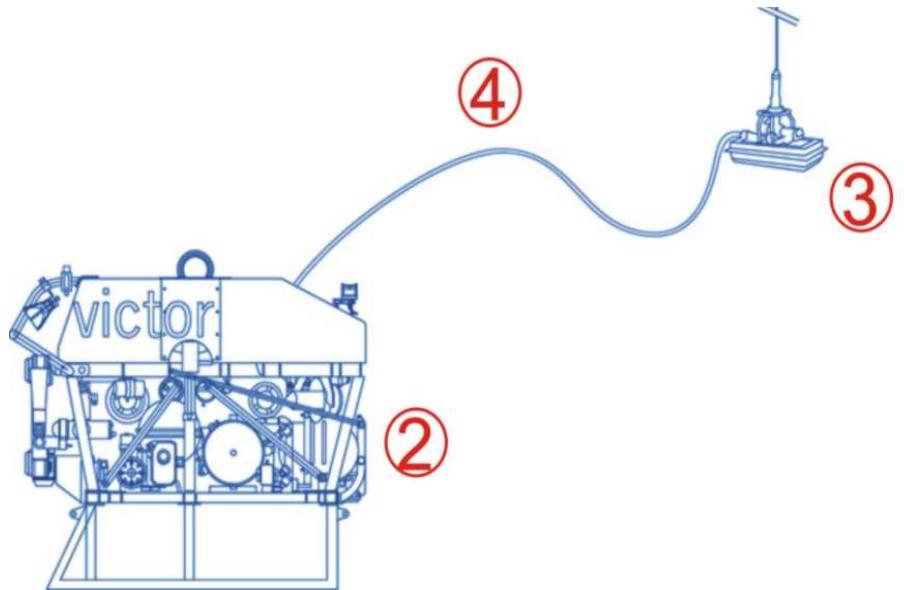

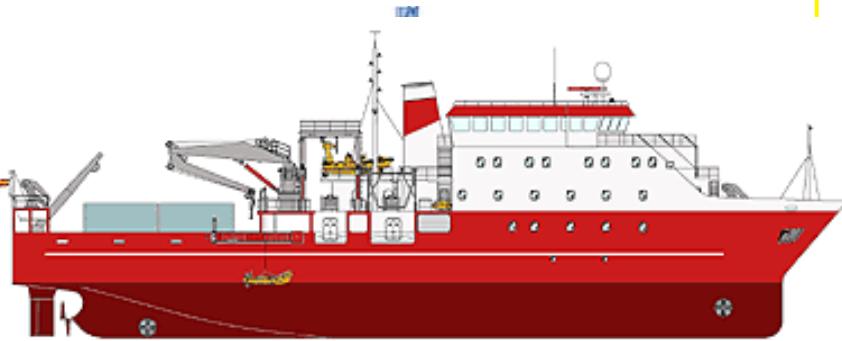

+ ground truth
of surface surveys,
With instrumentations
and
teleoperation

real time video mosaic, site Rockall

Cross Mob and teaming! Interoperability Training?

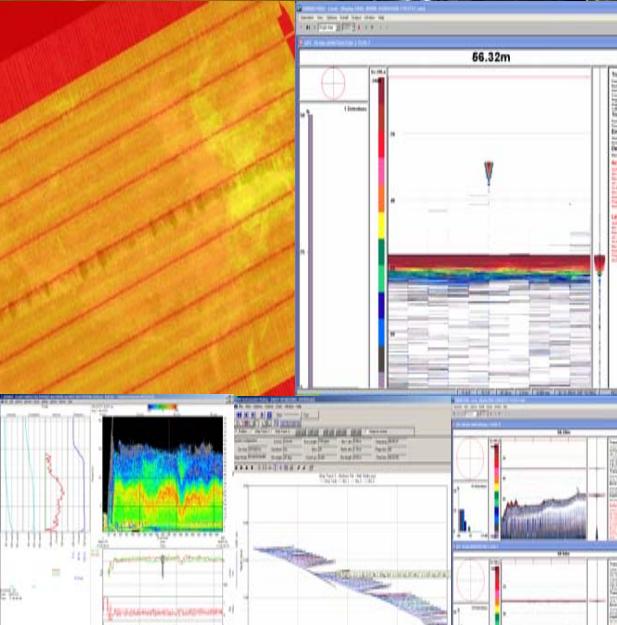

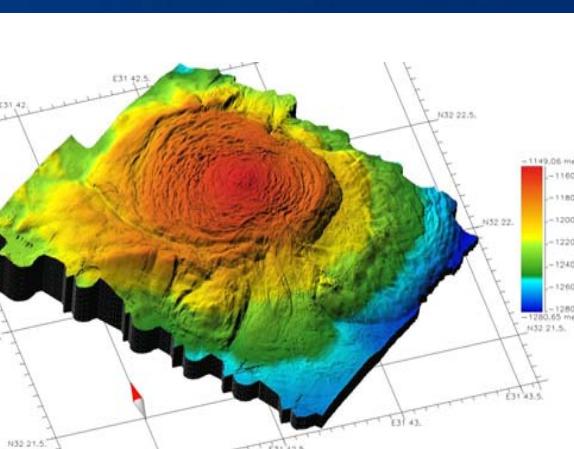

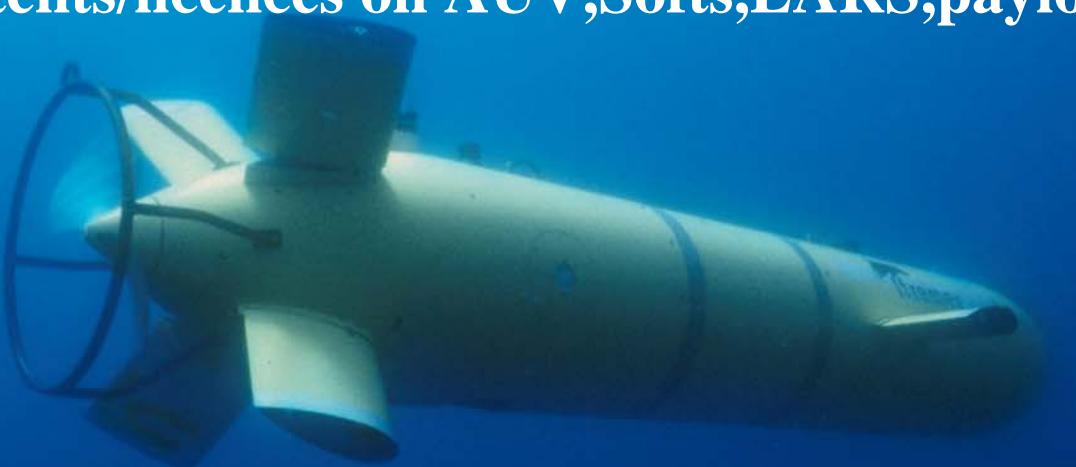

Survey AUVs for Sciences

3000m depth, 100km max range

modular “shared and interoperable” payloads

ASTERx,IDEFx 2000h, 3500km in 30 months

Patents/licences on AUV,Softs,LARS,payloads

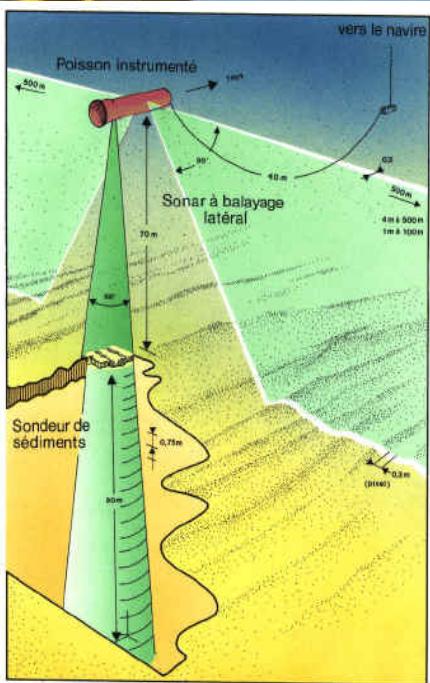

“Inside reality”

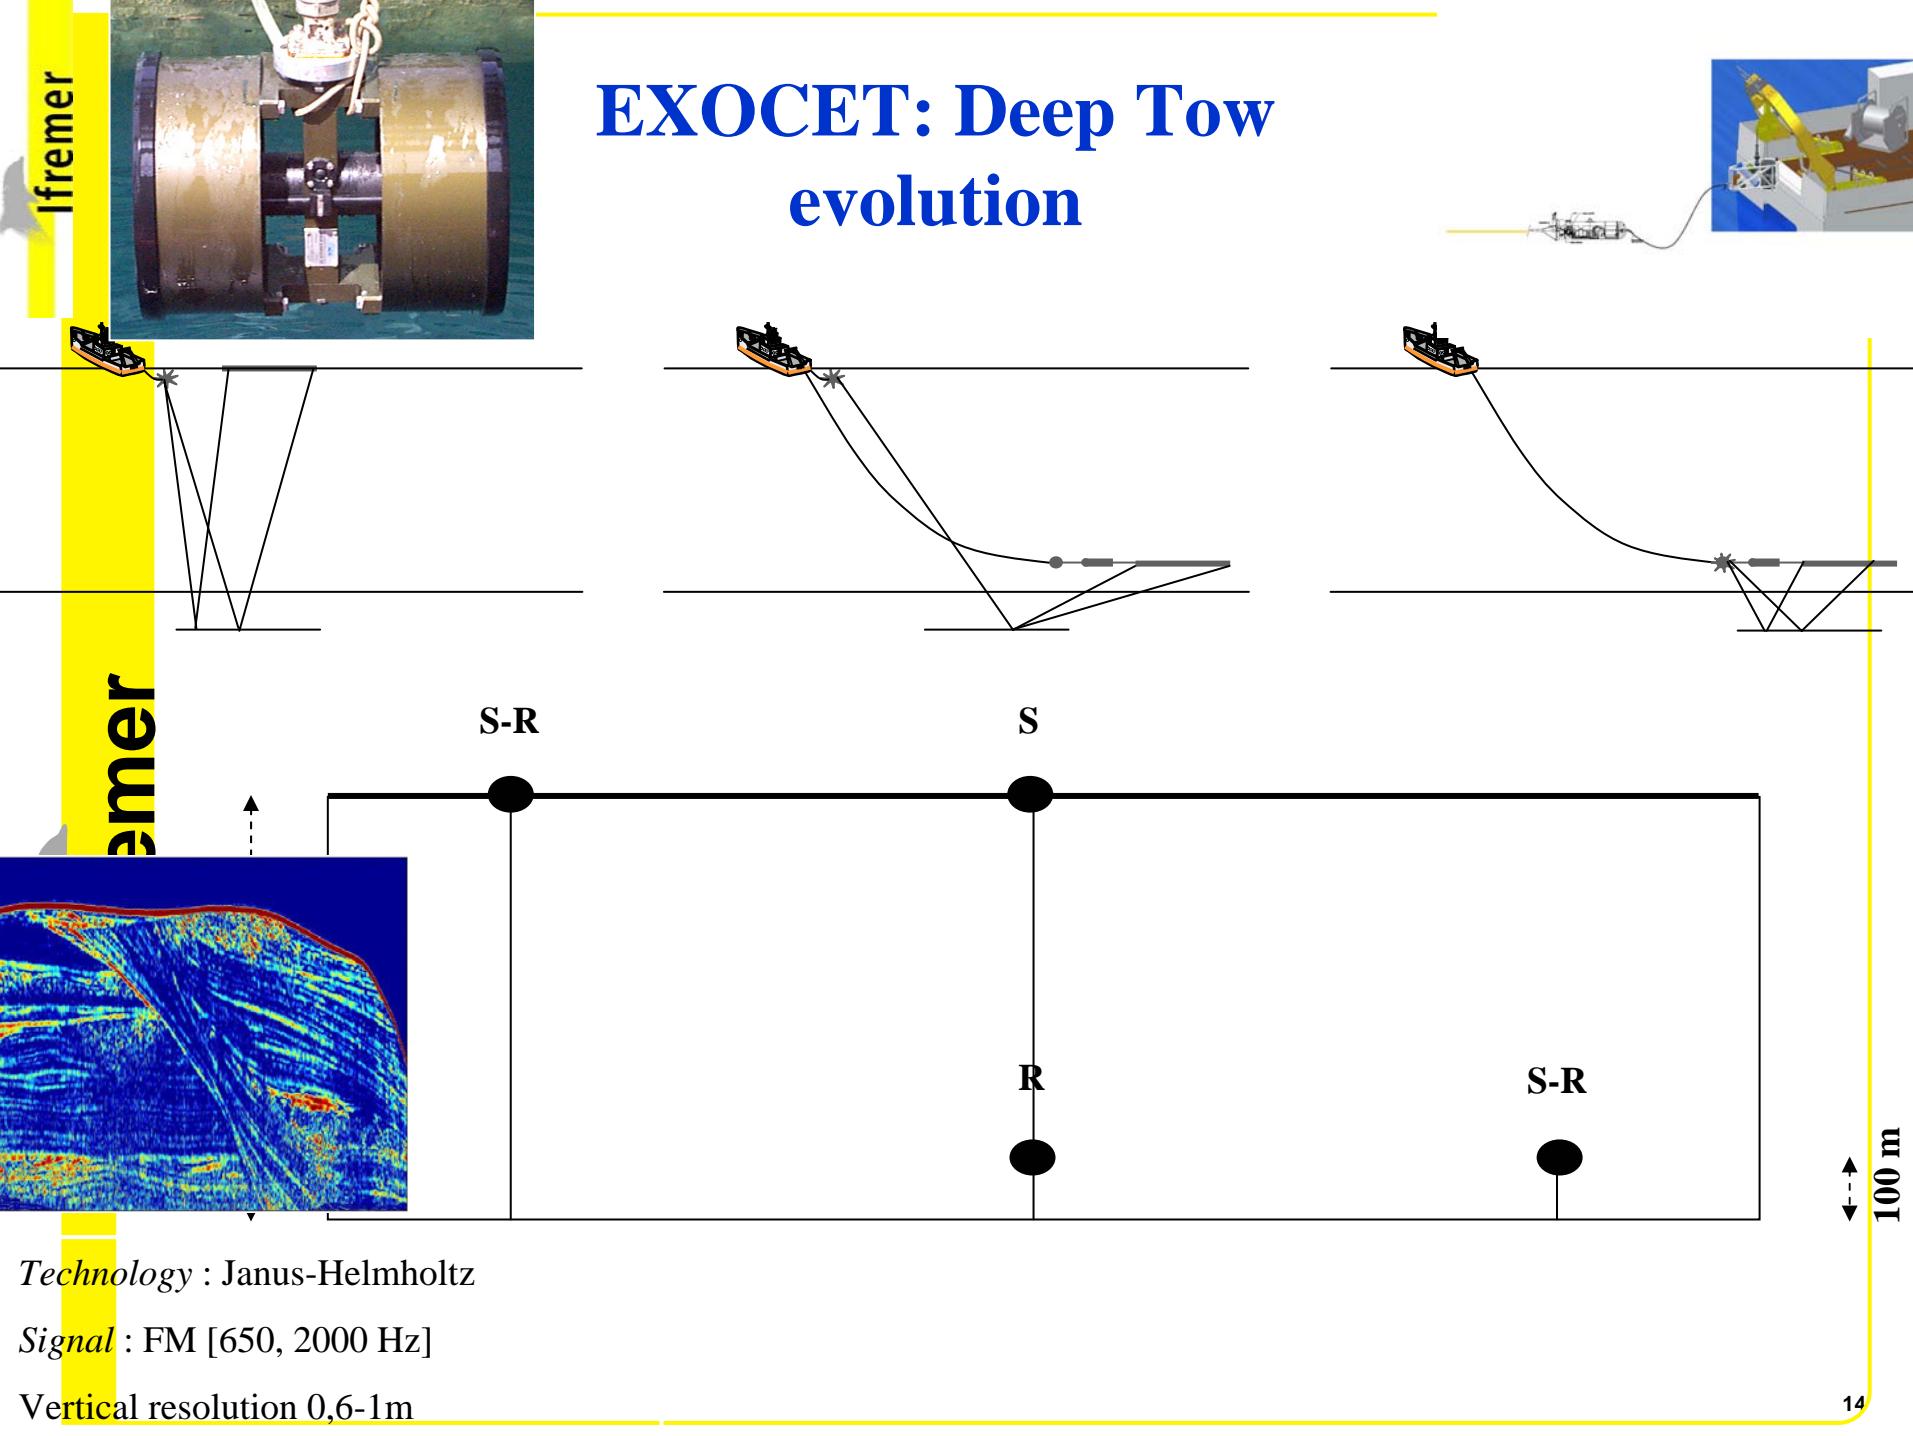

On the way to a realistic operational use

Again teaming and training is a key issue

SAR

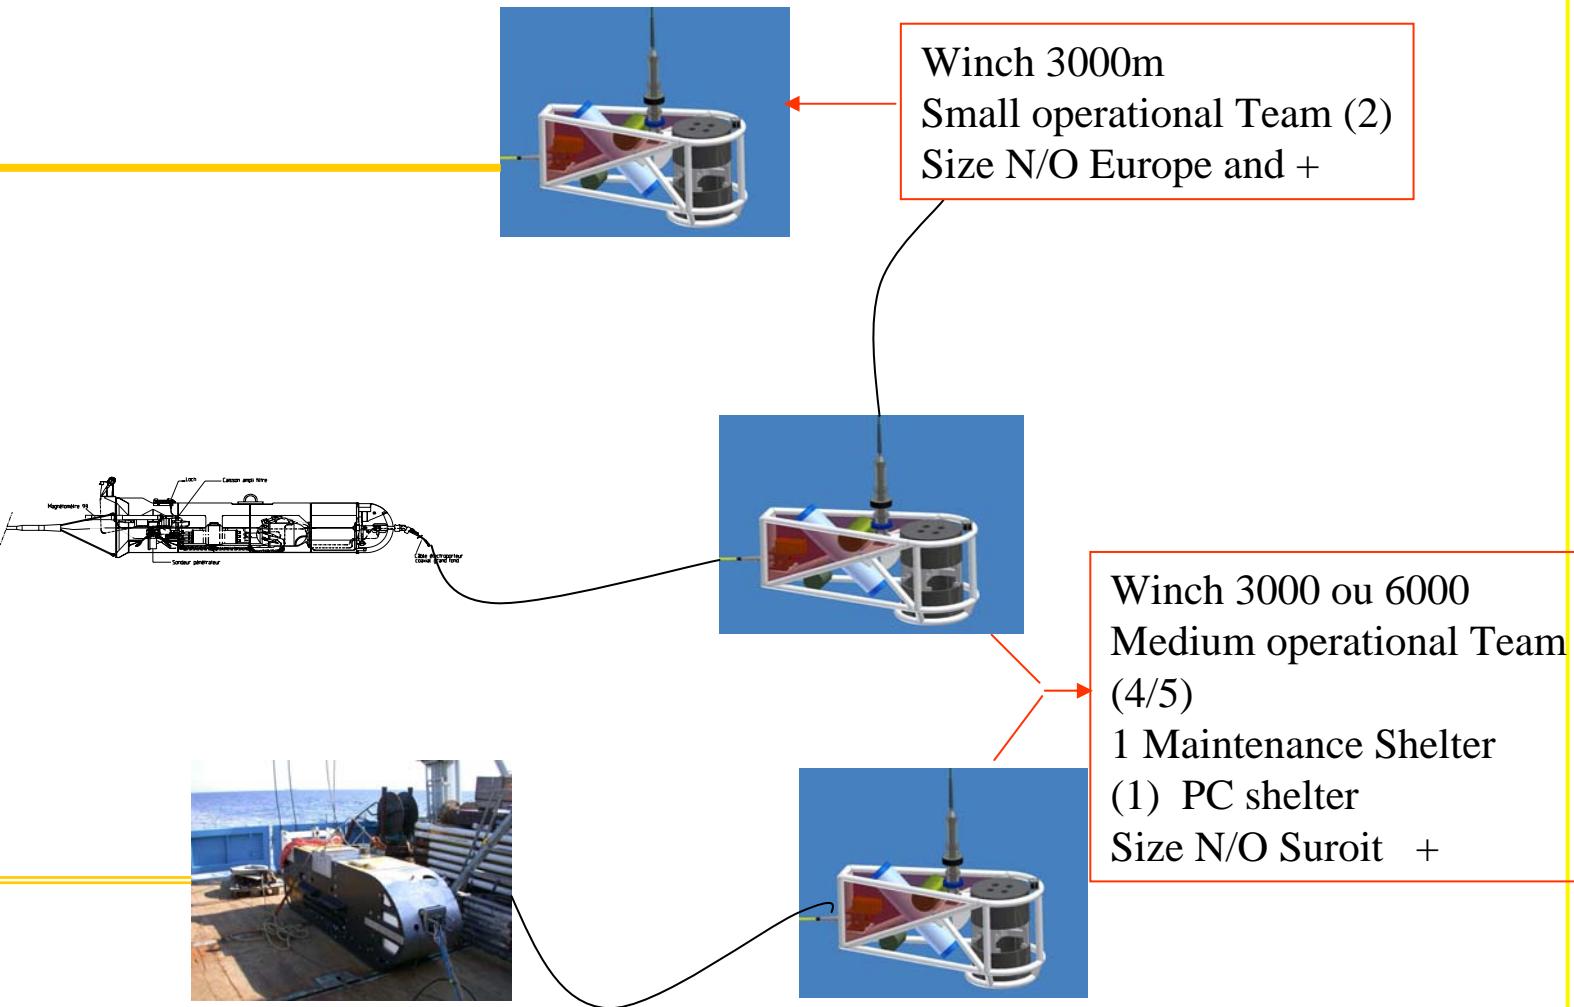

Sismique & Acoustique & magnétométrie
à haute Resolution
Un des meilleurs sonar HR

EXOCET: Deep Tow evolution

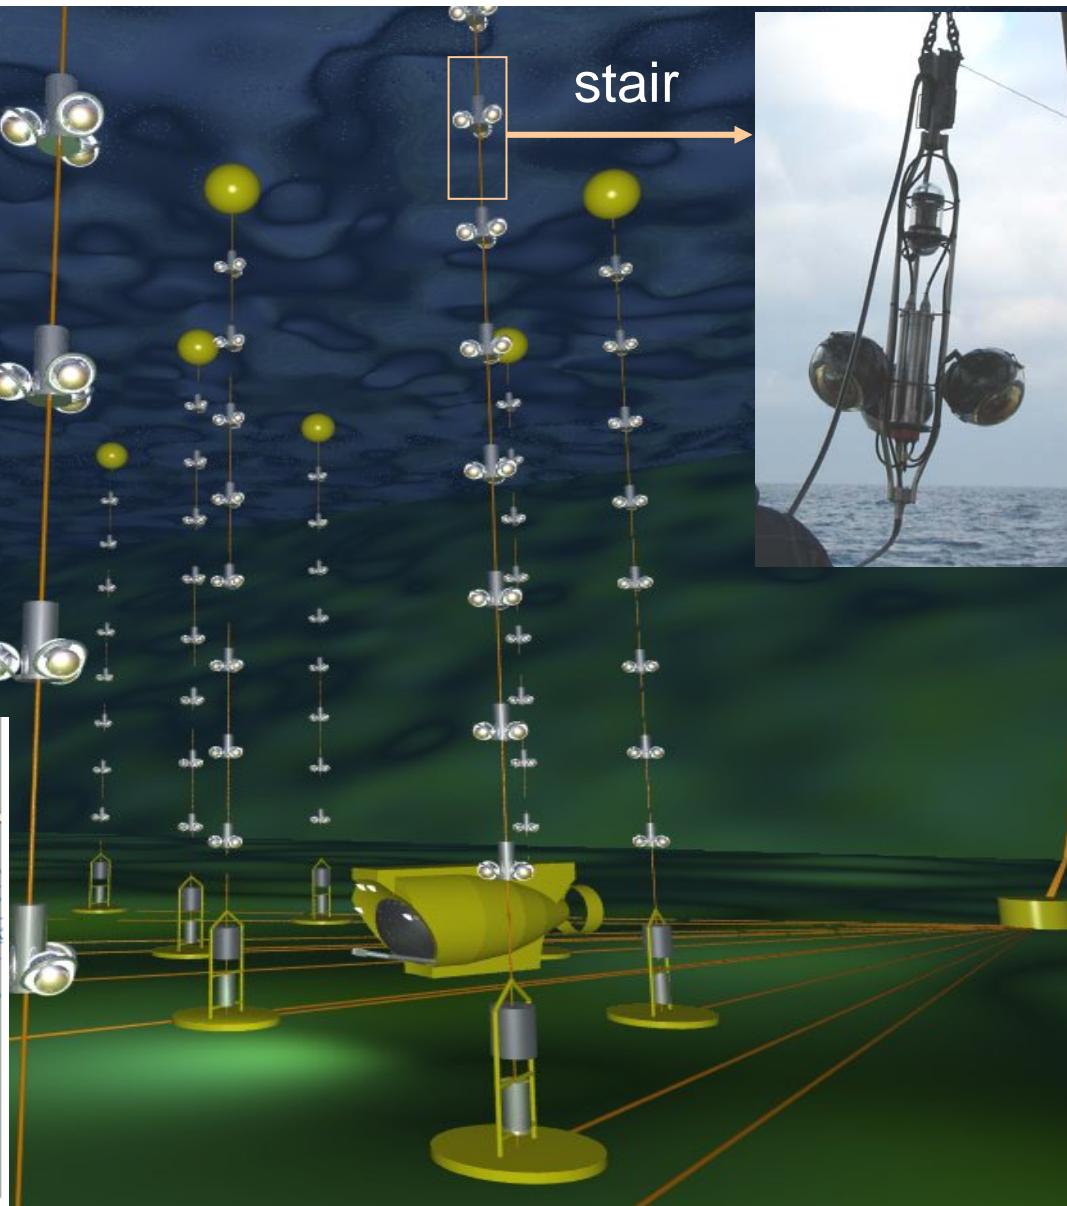

EXOCET Configurations

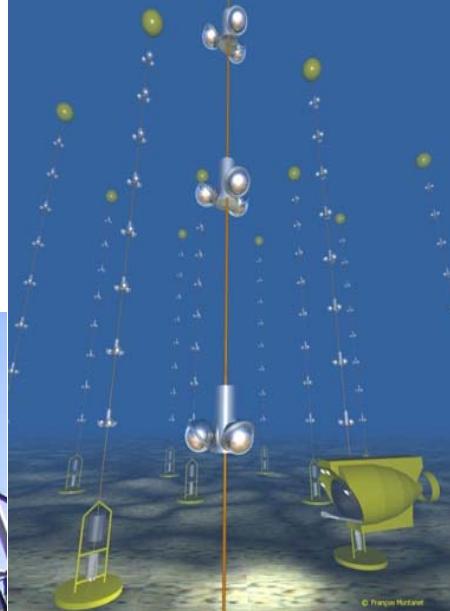

ANTARES; an existing large observatory (Neutrino telescope)

“Open” Test Bed site for Technology, design and installation

- 900 PMTs
- 12 lines
- 25 stairs / line
- 3 PMTs / stair

Operational engineering

Ifremer (and partners) AUVs experiences From RandD to operations: an example

- EPAULARD SBL system 1980- 300 dives up to 6000m, a supervised automaton (guide rope servoing)
- Hybrid AUV: Sirene->SWIMMER 2001, 30 dives 300m: Prototype, DR and New Precise Rangemeter with automatic Range selector also use for Docking + Sonar Based Docking
- Intervention and inspection AUV: ALIVE 2003 15 dives 70m, Inertial Nav + USBL + sonar - Optical DP
- 1995-2005 Survey AUVs

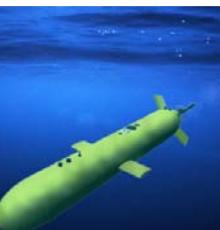

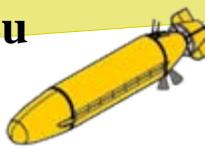

Epaulard
Ifremer
1980

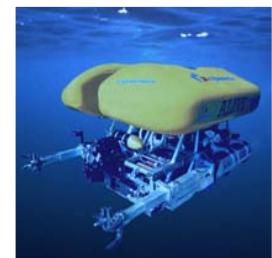

Sirene
Ifremer-UE
1999

Ifremer-Cyx-Eu
Swimmer
2001

ASTERx
Ifremer
2005

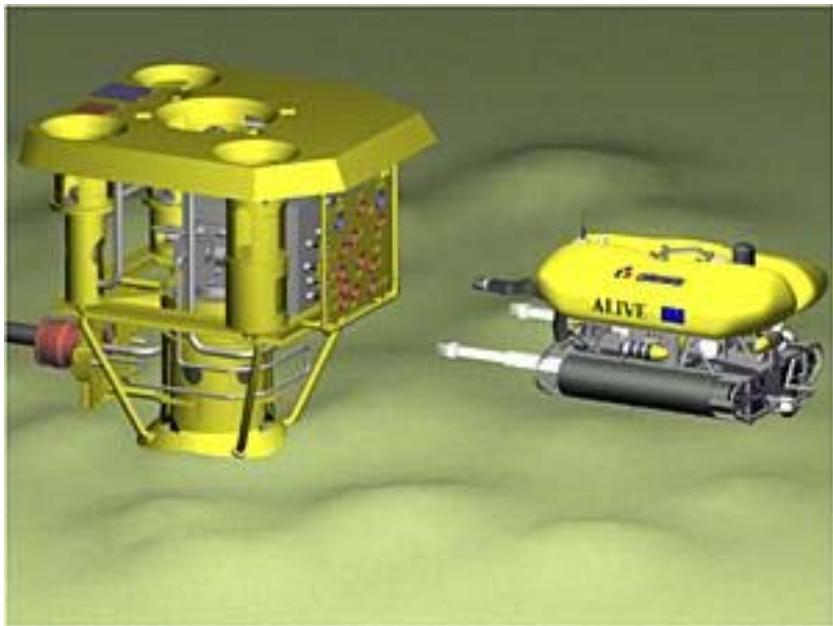

Intervention AUV

a multi-purpose AUV

- fitted with manipulators
- operated in acoustically-supervised mode
- able to dock to the infrastructure and interact with it

Ifremer

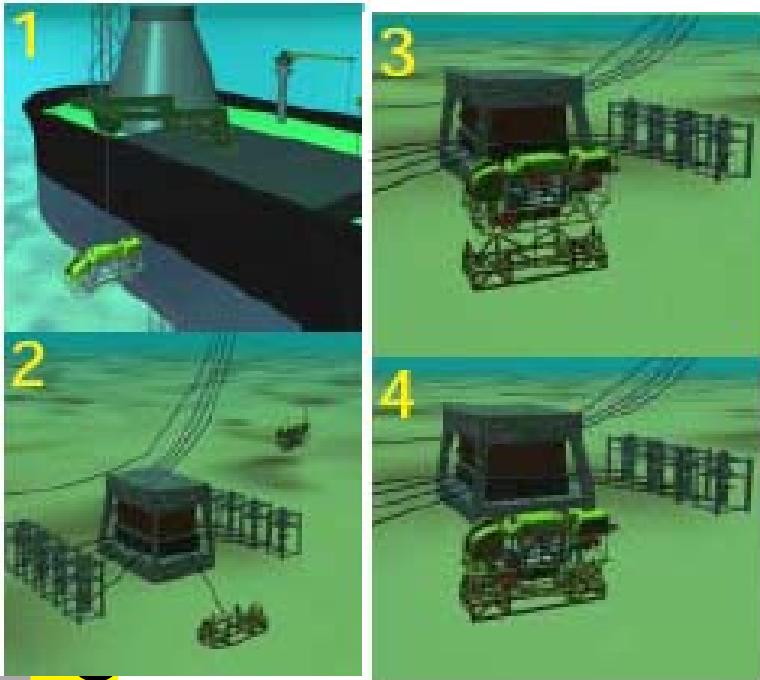

ALIVE (Ifremer/Cybernetix)

SWIMMER

- *Subsea Works Inspection and Maintenance with Minimum Environment ROV*
The first demonstration with Hybrid AUV

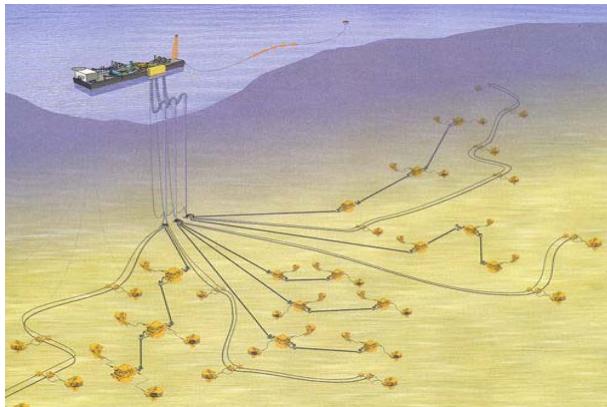

How a hybrid AUV operates

- 1 Launch
- 2 Transit
- 3 Approach
- 4 Docking
- 5 ROV operations

(Cybernetrix-Ifremer Swimmer)

RandD ALIVE : Sea trials campaign October 2003

1

Docking panel before intervention:
valve in horizontal position

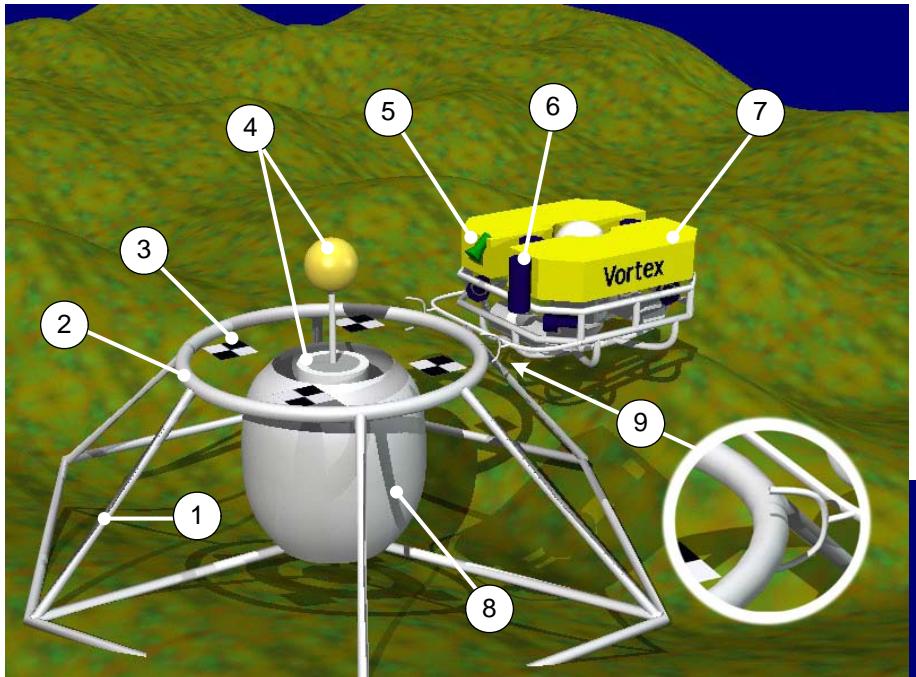

2

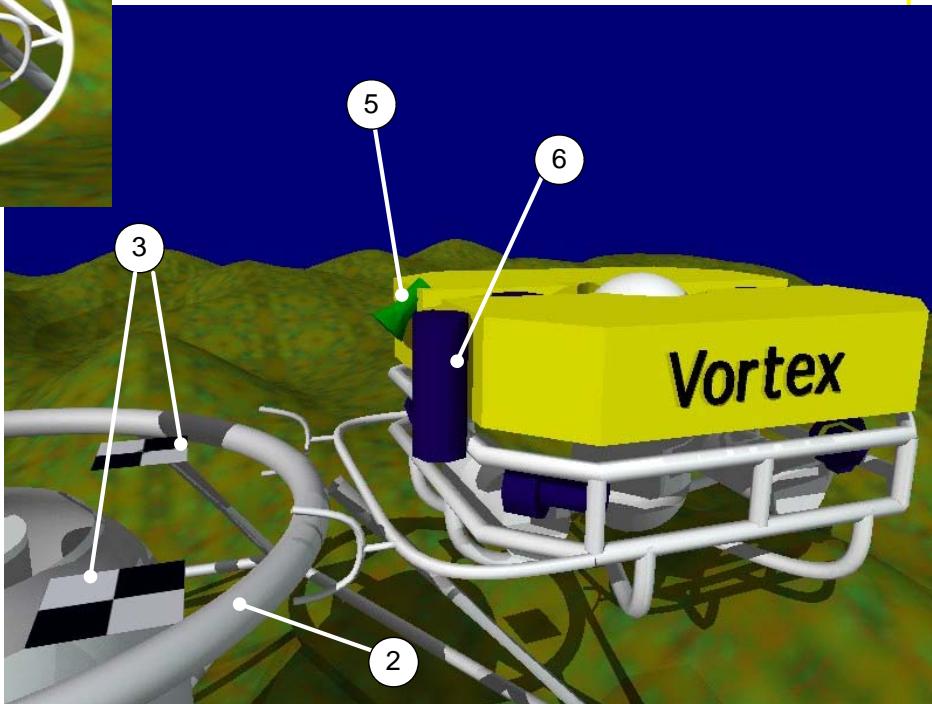

Docking panel after intervention:
valve in vertical position

- docking structure installed at 70 m depth
- docking and telemanipulation tasks achieved successfully

Generic Docking process with sonar and video (with CGG)

1. Seabed structure
2. Docking ring
3. Optic markers
4. OBS and receptacle

5. Vehicle camera
6. Scanning sonar
7. AUV
8. Sonar reflector
9. Grabbers

Heterogeneous autonomous marine vehicles

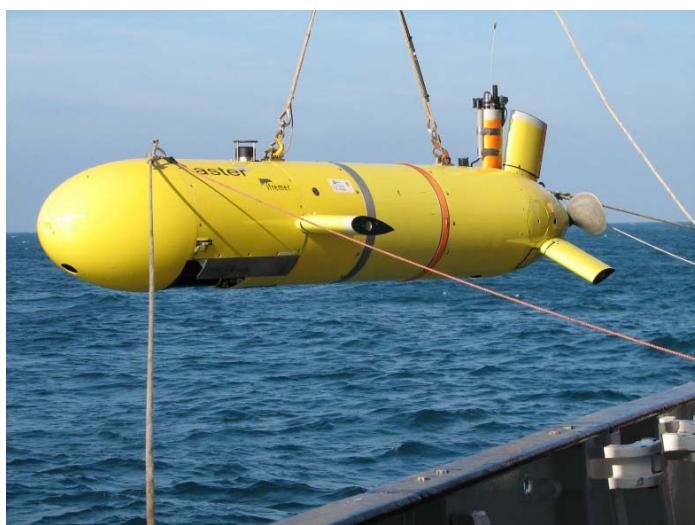

..what are they?

ASV
*Autonomous
Surface
Vehicles*

Underwater
Gliders

AUV
*Autonomous
Underwater
Vehicles*

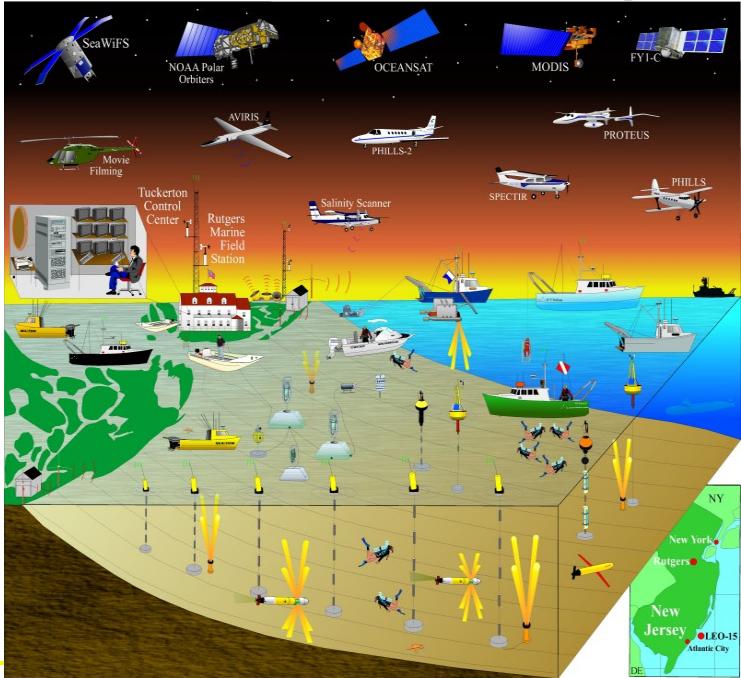

... and:

*Autonomous
aerial drones,
ROVs,....*

Future ?: Integrated systems made of Heterogeneous Autonomous « fixed and mobile » systems, more services on observatories?

LEO Instrumentation Used for the 2000-2001 Experiment

NEPTUNE
Instrumentation d'une plaque
